APRIL

\* Definition:-

- 1 - High level language (user oriented language)
- 2 - assembly language
- 3 - Machine level language
- 4 - Translators.
- 5 - Linker
- 6 - Loader

\* Real time applications of Lang. Translator. 2  
↳ Health Care Industries.

1. Jeffrey D. Ollman (70% - 80%)  
2. BS Publication. (80% - 90%)

\* Answers:-

1.A. Human can understand.

2.A. Microprocessor can understand.

3.A. Machine (Computer) can understand.

4.A. Translator which can translate the one lang  
to other lang. Ex: Compiler, Interpreter.

TUESDAY

2013  
APRIL

09

S.A. & S.A. Check:- previous of previous page.

\* Computer:-

Combination of H/W parts + S/W

1. { piece of  
mechanical  
devices }

2. { it is for the  
being controlled by  
compatible.  
S/W }

H/W

1.

2. Understand processing  
in form of Electronic  
circuit.

S/W

1.

2. Which is control part  
of binary Lang. in  
S/W.

## Ch:1 Language Translation Overview:-

1j. Nil & Component of System.

(i) Application Software:-

(a). word

- Bank Management Sys.
- Telegram.
- Whatsapp - Desktop.
- Accounting slw

→ System slw:-

(b.) - o.s. (Windows, macOS, Linux.).

- Compiler
- assembler
- interpreter.

\* Cimp Ham):-

fig. 2.5 - System slw is a barrier bet<sup>n</sup> hardware & application slw.

Usage of sys. slw:-

- Because without sys. slw we can't run app. slw.

- sys. slw used to high level to low level lang.
- to store

- Manage basic functions such as storing data, retrieving files and tasks etc.
- To make ~~action~~ <sup>Execution</sup> of each program
- To make fulltime utilization of all the resources.

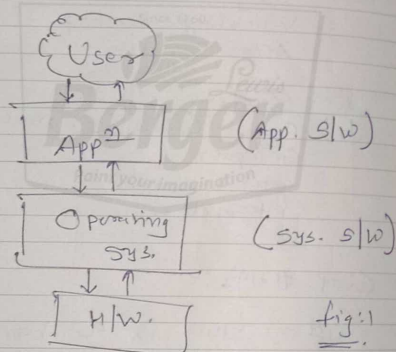

fig:1

fig:2

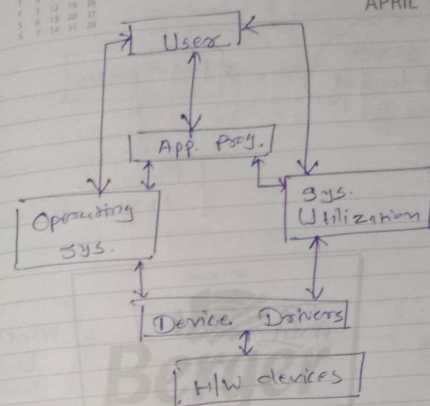

fig:3

\* All Components of entire sys. (fig:3).

1. Assembler
2. Compiler
3. Interpreter
4. Editor (To update the S/W)
5. Linker
6. Loader
7. debugger
8. Macro
9. OS.
10. Device Drivers.

F	5	12	19	26	
S	6	13	20	27	
S	7	14	21	28	

\* OS:-

- OS is s/w programme that enable user to communicate with comp. Hardware
- It helps to other program to run & control them.

Ex: Linux, window, Mac OS

- Single use
- multitasking
- Multi user
- Network
- distributed

Types of OS.

F	5	12	19	26	
S	6	13	20	27	
S	7	14	21	28	

\* device drivers:-

- it is a sys. program.
- Used to control no. of devices, which are attach to computer.

- device drivers tell to OS that how the device will work as certain commands which are generated by the user.

Ex: - Mouse drivers  
- Keyboard "  
- CD-RW "  
- Bluetooth "

\* Language Processes Activities:-↳ Language Processors:-

⇒ Convert source code into machine Code.

⇒ the activities which are Processed by ~~language~~ Compiler.

Design Patterns  
(Fmv)

2013  
APRIL

27

Essential

⇒ HTML, CSS, JS, Bootstrap } Fmv.

⇒ a design patterns are well proved soft for solving specific prob<sup>m</sup> / task.

- \* Creational Pattern
- \* Structural Pattern
- \* Behavioral Pattern

\* Basics tags of HTML:-

1. <html> </html>
2. <head> </head>
3. <body> </body>

\* Text Formatting tags:-

- <font> #imp
- heading
- para.
- breakline.

Ex. of tags v/s attribute.

hyperlink tag:-  
<a href="link">...</a>

⇒ 3 Cases:-

- 1. in same folder
- 2. in diff folder
- 3. online link

copy src with .jpg/.png/.gif  
and link copy src.

sys.

{ PHP + JS + Front-end.

{ DSP } [ FMV ]

\* 9/12/22 NOTES

- \* JS: lightweight integrated pro. lang.
- \* It's integrated with HTML & JAVA
- \* It can't be implement as a whole language But it can be implement as a part of webpage.

\* Client side javascript :-

\* Advantages :-

1. Less server interaction.
2. Immediate feedback to the visitors.
3. Increased interactivity.
4. Richer Interface.

\* Limitations :-

# 2 Marks  
Meetings  
(Fixed)

→ javascript advantages & limitations.

1. javascript development tools.
2. syntax of js.

~~script language~~ - JavaScript

Var, let, const

&lt;!-- contents --&gt;

HTML ~~code~~ comment

## NOTES

\* `<script language="JavaScript" type="text/javascript">`

// code  
`</script>`

(fixed)  
 2 marks \*

`<noscript> ... </noscript>`

→ in some web browser

doesn't support js.

1. Var :-

→ `Var name = "varj";` ✓  
~~Var~~ `name = 10;` ✓  
`name = true;` ✓

then `<noscript>`  
`</noscript>` will execute  
 (if...else type)

2. let :-

`let name = "varj";` ✓  
`let name = 10;` X  
`name`

✓ order  
"my PPT"

3. const :-

`const name =`

\* Semicolon is optional.  
 Comment is optional.

\* lang. processing = [Analysis of Source prog.] + [Synthesis of Target prog.]

⇒ In analysis phase, It has 3 types...

1. Linear Analysis :- In which the stream of characters making up the source program is read from left to right and group into tokens. There are sequence of characters having a collective meaning.

- Linear analysis is also known as "lexical analysis."

FRIDAY

S 11 18 25  
S 12 19 26

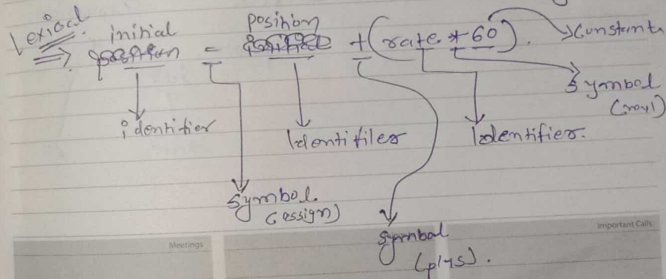

2. Hierarchical Analysis :-

In which character or tokens are group hierarchical into nested collections with collective meaning. Also known as "syntax analysis".

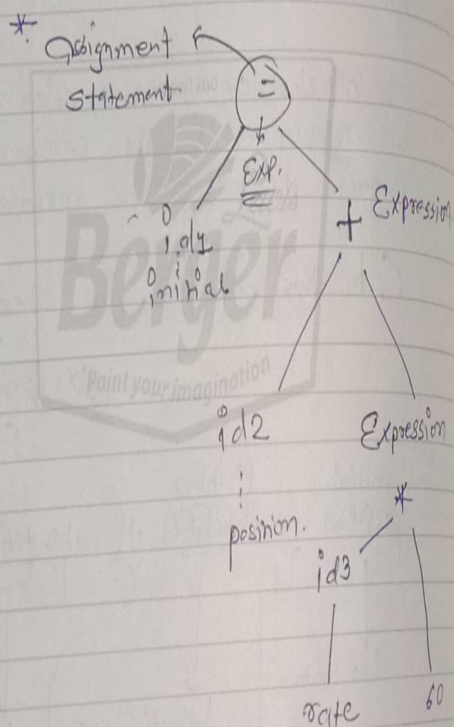

3. Symmetric Analysis :-

In which certain checks are performed to ensure that the components of a program fit together meaningful.

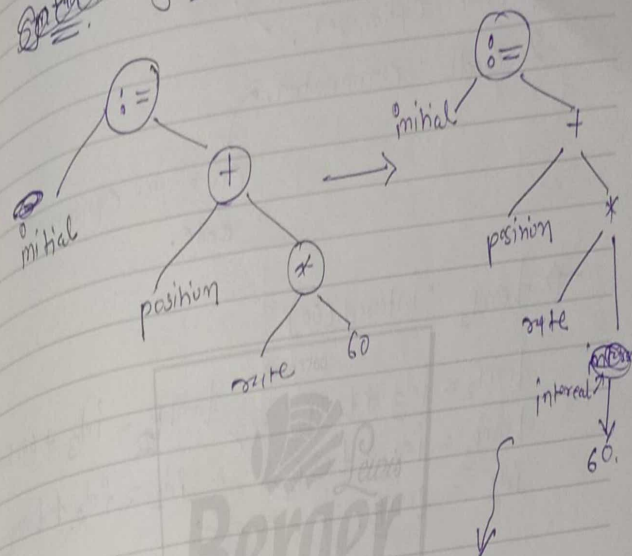

In this analysis, we check type. Ex: Variable type checking.

## Hierarchical Analysis:-

Symmetrie      Symmetrie :-

```
temp1 := interest(60)
temp2 := rate * temp1
temp3 := position + temp2
initial := temp3.
```
